

Career/prospect in Geography

Geography is an interdisciplinary subject which entails the study of natural sciences, social sciences, and cartography. In other words, Geography includes learning about the physical and cultural features of Earth and their relationship. However, it is important for career path depending on whether a student takes up Physical Geography or Human Geography. Physical Geography is a natural science that focuses on the different elements of Earth. On the other hand, Human Geography refers to a social science dealing with problems within communities and cultures. Popular careers in Geography includes academics (teacher/professor), Researcher in organisations, Cartographers, Environmental Consultant, Urban Planner, Tourism Officer, GIS Specialist, Demographer, Hydrologist etc.
